

Aderinsola “Sola” Aderonmu is a second-year medical student at the Drexel University College of Medicine from Queens, New York. She graduated from Johns Hopkins University with a B.A. in Public Health and Master of Science degrees in Biophysics and Physiology and Biomedical Sciences from Stony Brook University and Drexel University, respectively. Prior to starting medical school, Sola worked as a STEM teacher and community outreach coordinator for Sports & Arts in Schools Foundation, the largest non-profit after school enrichment program in the country. During this time, she helped to increase science enrichment programs in underserved communities in Brooklyn and Queens as well as connect Black and Hispanic students with mentors in STEM related fields. While in medical school, Sola has continued her commitment to the community by creating STEM outreach and mentorship programs for students throughout the Philadelphia area to increase and encourage underrepresented minorities to pursue careers as health professionals. She most recently has been involved with the DUCOM Anti-Racism Task force, a collection of students, faculty, and staff that are determined to better train culturally competent physicians, increase outreach to underserved communities, increase admission and retention of Black medical students and create an equitable and safe environment for all students of color to learn. When she is not studying and involved with her many extracurriculars, she loves to dance, write poetry, sing, and root for her beloved New York Knicks.
